DETAILED ACTION

This Office Action is in response to Request for Continuation Examination ((RCE) filed February 6, 2006. Claims 1-9, 20 are presented for further examination.

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 2. Claims 1-9, 20 are rejected under 35 U.S.C. 102(e) as being anticipated by Klug et al. (hereinafter "Klug", US 6,823,327 B1).

As per claim 1, Klug discloses an information processing apparatus terminal device, capable of transmitting information comprising:

- receiving means receiving a request signal transmitted from the terminal device (column 2, lines 7-10, 37-41);
- user identifier generating means for generating identifier corresponding to request signal (column 2, lines 13-15, 41-45);
- Generation source identifier storage means storing a generation source identifier identifying a source of where the user identifier is generated (column 2, lines 13-15, 41-45);

Application/Control Number: 09/781,496

Art Unit: 2157

• Wherein the generation source identifier is allocated form an external apparatus (column 9, lines 45-67)

 User transmitting means for transmitting the user identifier and the generation source identifier to the terminal device (column 2, lines 7-10, 37-41, column 11, lines 8-13, 43-50).

As per claim 2, Klug discloses the information processing apparatus according claim 1, wherein the receiving means receives the request signal requesting the information processing apparatus to issue a user password identifying a user operating the terminal device and to issue an introduction password indicating the generation source of the user password (column 2, lines 13-31).

As per claim 3, Klug discloses the information processing apparatus according claim 2, wherein the receiving means receives individual information of the user operating the terminal device (column 1, lines 47-60).

As per claim 4, Klug discloses the information processing apparatus according to claim 3, wherein the receiving means receives request signal requesting issue of the user password and the introduction password that are used for accessing homepage information contained within an other information processing apparatus, specifies the

homepage information the information processing apparatus that introduces the homepage information of the other information processing apparatus (column 2, lines 5-25, column 4, lines 24-33, column 5, lines 1-7, 18-25).

As per claim 5, Klug discloses the information processing apparatus according to claim 3, further comprising individual information storage means for storing the received individual information (column 5, lines 14-17, 29-31, 35-38).

As per claim 6, Klug discloses the information processing apparatus according to claim 5, wherein the user identifier generating means generates a user password corresponding to the received individual information, and transfers the generated user password to the individual information storage means that stores the transferred user password correspondingly to the individual information (column 2, lines 7-10, 37-41, column 11, lines 8-13, 43-50).

As per claim 7, Klug discloses the information processing apparatus according claim 1, wherein the generation source identifier storage means stores the generation source identifier identifying homepage information (column 5, lines 14-17, 29-31, 35-38).

As per claim 8, Klug discloses the information processing apparatus according to claim 7, wherein the generation service identifier storage means stores an introduction

Application/Control Number: 09/781,496

Art Unit: 2157

password as the generation source identifier identifying the homepage information (.column 5, lines 14-17, 29-31, 35-38).

As per claim 9, Klug discloses the information processing apparatus according to claim 1, wherein the user identifier and the generation source identifier are used when the terminal device accesses information contained within an other information processing apparatus, and the transmitting means transmits the user identifier and the generation source identifier to the other information processing apparatus (column 2, lines 5-25, column 4, lines 24-33, column 5, lines 1-7, 18-25).

As per claim 20, Klug discloses an information processing method comprising the steps of:

- receiving a request transmitted from a terminal device (column 2, lines 7-10, 37-41);
- generating a user identifier corresponding to the request (column 2, lines 13-15, 41-45);
- Transmitting the generated user identifier and a generation source identifier to the
 terminal device, wherein said generation source identifier is allocated from an
 external apparatus and stored in an information processing apparatus and identifies
 a source where the user identifier is generated (column 2, lines 7-10, 37-41, column
 9, lines 45-67, column 11, lines 8-13, 43-50).

Response to Arguments

The Office notes the following arguments:

(a) Klug does not teach where the generation source identifier is allocated by an external source.

3. Applicant's arguments filed have been fully considered but they are not persuasive.

In response to:

(a) Klug discloses the third party website allowing a user to either register at their website or register at the registrar's website. Users that choose to register at the registrar's website are sent to that website by the third party website. The third party website sends the user to the registrar's website using an identifier (URL) that the third party has stored for the registrar (column 9, lines 45-67). Therefore, the generation source identifier (URL/registrar's website) is allocated (distributed) from an external apparatus (third party website)

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Barbara N. Burgess whose telephone number is (571) 272-3996. The examiner can normally be reached on M-F (8:00am-4:00pm).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Ario Etienne can be reached on (571) 272-4001. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
